

ABSTRACT OF THE DISCLOSURE

A bracket is provided to couple a mask frame to a stud of a panel in a color picture tube having a tube axis. The mask frame has a rectangular rim in parallel with the tube axis and a flange vertically extending from a rear end of the rectangular rim towards the tube axis. The bracket includes a suspending arm disposed in parallel with the tube axis and provided with a hole coupled to the stud, a fixing arm fixed on the rectangular rim of the mask frame, and a vibration absorber connecting the fixing arm and the suspending arm and having a predetermined length.
